progression across the mpc range has shown that akai are concentrating on making the software sound better, while at the same time retaining the familiar controls and workflows that we all know and love. the multi-expression sequencer is a nice new feature, but it's also been tweaked somewhat - you can now insert a blank note after every clump of expression. from there you can place the midi and audio input, or play patterns using single notes from your library. this saves a lot of tedious key-tapping, and at the same time you can now get a full working rendition of a song using just the computer. the advanced software is as flexible as the hardware - it's built around intelligent automation, and is very responsive to changes made by midi control applications or other midi controllers. once loaded with samples, it's easy to set up preset patterns, or create your own sequences. as yet, akai haven't

shied away from simplifying its features, and it's still very easy to learn and use, especially when you get the help of tutorials and videos. mpcs are easy to program, and the software is no exception. all parameters have been refined, and are now even more accessible, while all controls are tied to the very same faders that you see and touch when you design with the hardware. akai's graphical user interface has been up-dated for less-savvy musicians with a simple and easy to navigate layout. it's like having your own secret jedi wizard, ready to show you shortcuts to the more complicated parts of the instrument. using the midi setup is a snap, and you can always use the full bank of 128 tracks in portamento mode to break in new samples. if you have any experience with working with the classic hardware mpcs, then you'll be right at home. 5ec8ef588b
