one of the hottest new plugins for virtual instruments, in fact, is aether. it was 2caudios debut plugin in 2009 and essentially set a new benchmark, being unmatched in terms of audio quality, scope and usability. yes, it looks relatively complex and isnt necessarily going to be a first choice for quickly setting up basic reverb sends for a typical mix (although of course it can do that with bells on). where aether really comes into its own is as the ultimate reverb for dramatically enhancing sound design, ambience and spot fx: hits, cinematic booms, club track-style swirls of shifting reverb clouds that can add a lot of extra movement, vibe and overall epic-ness to a track. much like lexicon being the king of digital algorithmic reverb, the emt 140 reverb unit represents the pinnacle of the physical plate reverb sound. this largehardware unit was originally released by german phonograph manufacturers elektro-mess-technik (emt) in 1957, and quickly became a studio favourite, remaining in production for a further 25 years. up until that point, the only reverb options for producers were to use spring reverb units (only really suitable for guitars), or to record or re-record tracks in an appropriately reverberant room, hall or custom-built chamber (inconvenient and/or expensive). the emt 140 literally revolutionised studio reverb, not only offeringa new level of convenience (a 7 long, 600lbs box was of course considered amazingly convenient, relatively, at this time; imagine what a 1950s engineer would make of plugin reverb..!), but also doing it with extreme style, providing the kind of lush, thick and diffuse reverb sound that is still revered today for its warmth and musicality.
